401GO

Elegant payroll solutions.

INTEGRATIONS CREATE SIMPLICITY

Connecting your payroll with your 401(k) should be simple. That's why 401GO offers flexible integration options to fit the way you work — from full automation to guided support.

Our API Advantage

Our 360° API integrations connect directly with many of today's most popular payroll providers — keeping your plan running smoothly with minimal effort.

Our technology is built for stability, flexibility, and speed.

✓ **Nimble and scalable:** Updates can be deployed quickly and cost-effectively, with minimal downtime.

✓ **Dedicated engineering support:** Our in-house integration team actively monitors and maintains connections, ensuring issues are resolved efficiently.

✓ **Industry-leading reliability:** Our API connections are designed to stay stable — even as payroll systems evolve or data volumes grow.

True360™ Services

Even if your payroll system doesn't support integration, our True360™ service provides a fully managed experience.

We'll securely gather your payroll data, process updates, and handle contributions for you — transforming a manual or 180° process into a True 360° experience.

With True360™, every employer can enjoy full-service automation — regardless of their payroll provider.

Options for Partial Connections

Not every payroll provider offers full automation yet. When 360° isn't available, we'll work at the highest integration level possible. No matter your payroll setup, 401GO ensures smooth, accurate, and dependable coordination.

New Integrations Coming

We are always adding new payroll partners and we have a constant flow of API integrations being built and tested. If yours isn't available yet, it probably will be soon.
